New technology showcase:

Welcome to the special edition of the monthly Stokoe newsletter. In this issue, we will breakdown and showcase the most interesting, valuable, and cutting edge technology in the security industry.

Security tech can be a bit jargony, so in this newsletter we will do our best to explain some of the more complex tech that we offer here at Stokoe. From cameras powered by AI to security robots to drone, this newsletter has it all!

ISC WEST RECAPPED

What is Edge AI?

Edge AI means running artificial intelligence directly on your system instead of sending data to the cloud.

ii-PRO

NEW X-series Fisheye

Why it matters

Processing video on the camera itself allows for faster, smarter, and more secure monitoring without relying heavily on internet connectivity.

Key benefits

- **Instant alerts:** Cameras can detect events (like a person falling or unusual movement) and notify staff immediately.
- **Lower bandwidth use:** Only important data (alerts, snapshots) is sent, reducing network and storage costs.
- **Better privacy:** Sensitive footage can be processed or made anonymous on-site, helping meet regulations.
- **Reliable performance:** Systems continue working even during network outages.
- **Improved accuracy:** Analysing raw video locally can enhance detection, especially for small or distant objects.

Edge AI makes security systems faster, more efficient, and more dependable—while improving privacy and reducing costs.

More cool technologies from ISC West:

Robotic security

Security Robots

Security robots monitor environments, detect threats, and support real-time decision-making, enhancing safety with consistent, automated surveillance.

Self-Driving Security Rovers

These autonomous ground units patrol large or outdoor areas, providing continuous coverage and responding to unusual activity without on-site personnel.

Security Robot Dogs

Designed for mobility in complex environments, robot dogs access hard-to-reach or hazardous areas while delivering agile, rapid-response monitoring.

Upcoming product: The Davebot

New advancements in mind scanning technologies will allow us to upload Dave's brain and put his consciousness to good use in an automaton.

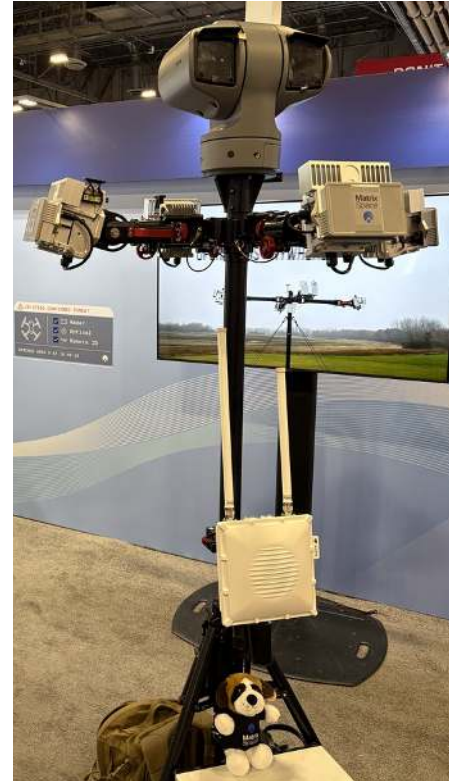

Coming soon to a warehouse near you, your very own sentient Dave!
Capable of 24/7 work with no breaks.

Just kidding, April fools!

Drone Tech

VS.

Counter-Drone Tech
