

STOKOE

COMMUNICATIONS

Happy summer!

Welcome to the new and improved Stokom.com!

Our STOKOE COMMUNICATIONS team is thrilled to welcome you to our brand new website. If you've made it this far you've found our news page, but you may also want to check out our services tab for an updated list of what we have to offer, our about page for a brief overview of our history, or our contact page where you can request services directly. That's right, we can now take RFQ's straight from the website, just in case you're feeling phone-shy. But don't worry, we'll still respond ASAP to any calls or emails you send as well!

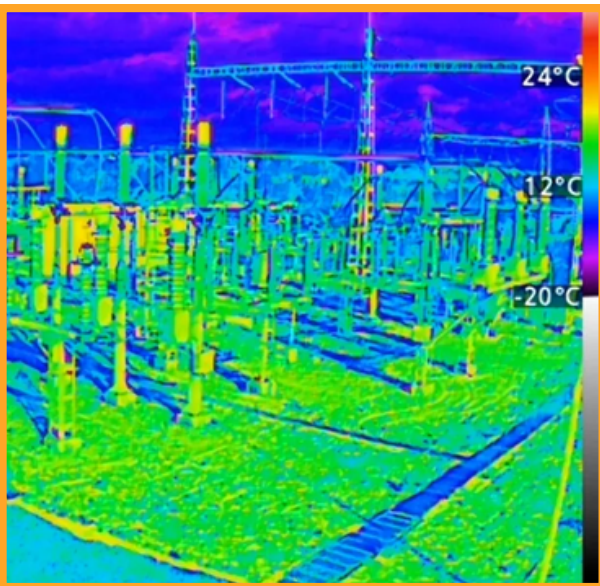

Are you beating the heat? This summer is a scorcher! We hope you're staying cool however you prefer, whether its chilling by the pool, relaxing at the cottage, or hibernating inside with the AC. Keep an eye on heat warnings and air quality to stay safe, healthy and cool.

KEEP AN EYE ON THE HEAT WITH A THERMAL CAMERA

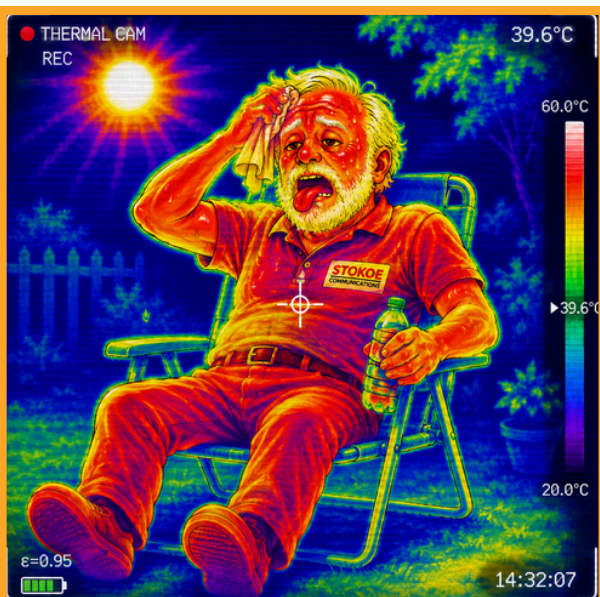

i-PRO VI Thermal Camera System

Thermal cameras have a variety of use cases such as for detecting body temperature (above). Another valuable use case for thermals is for monitoring sensitive electronic equipment and infrastructure such as this tranformer station (left). Get ahead of both fevers and fires with a new thermal camera!

Axis Q2112E

Looks like Dave's overheating, someone get this guy a fresh cold one! Stat!!
